# Waypoint Global Suite
## *Quality Planner*

### Course Mission:
Waypoint Global's Quality Planner class is a 3-day course. The first two days of training are designed to provide a comprehensive review of the developmental tools and concepts needed to create and manage APQP documents. The third day of this class focuses on taking that new information and putting it to use by troubleshooting common problem scenarios. There are numerous information links in Quality Planner, many of which involve the creation of child documents from information found in their respective parent documents. If you do not create your parent documents correctly, the child documents will not exist. The third day of class offers the safest environment in which to learn from these mistakes.

### Prerequisites:
Attendees should have at least a basic knowledge of the APQP Process and the documentation necessary for successful PPAP submittals.

### Audience:
Quality planning core team members (e.g., quality managers, engineers, etc.).

### Format:
Classroom hands-on training in Indianapolis, IN

### Course Highlights:
In three activity-packed days of Quality Planner training you will…
- Learn how to track the five APQP stages: Planning, Product Design & Development, Process Design & Development, Product & Process Validation, and Production.
- Learn to create and edit APQP project documents, as well as gather & verify them for PPAP submittal.
- Learn how to create supporting documents like Capability studies, Gage R&R studies, Setup and Process instructions and more.
- Learn how to configure and customize your APQP system.
- Learn how to associate other supporting documents to a project.
- Gain an understanding of how Quality Planner controls and distributes documents.
- Learn how to create electronic binders for APQP project documents.
- Work in small groups to resolve and complete 14 problem scenarios for three separate projects. These are the most common problems that users create for themselves. The instructor will debrief the class after all groups have completed their scenarios.
- Learn how to add special characteristic symbols for use in your projects.

### Course Length:
3 days

### Cost:
$1,275 USD per person
